RollerPRO® 4900 Series

4-Roller

Materials of Construction

Housing: Cast Iron (blue epoxy paint) or Diamond™ Stainless Steel

Shaft Seals: Viton cartridge type lip seals

Seal Ring: Viton

Shaft & Rotor: 410 stainless steel shaft/overmolded rotor

Bearings: Permanently-lubricated, heavy-duty sealed bearing/needle bearing

Models:

4900C	Cast Iron (Blue Epoxy Paint)
4901C	Cast Iron (Blue Epoxy Paint) (Hollow Shaft)
4900DSS	Diamond™ Stainless Steel
4901DSS	Diamond™ Stainless Steel (Hollow Shaft)

Specifications

Number of Rollers	4
Rollers Diameter	1/2"
Flow (GPM) @ Specified Pressure and Speed	RPM
PSIG	1800 2200 2600
0	6.3 7.7 9.2
20	5.8 6.9 8.5
40	5.0 6.2 7.9
100	4.4 5.6 7.5
200	3.8 5.2 7.2
300	3.4 4.8 6.8
Max Pressure (PSIG)	150
Ports	3/4" NPT
Shaft Diameter	5/8" or 1/2" hollow shaft
Dimensions – W x D (in)	4-3/4 x 4"
Weight – lb (kg)	5 (11)

Dimensions

Delavan RollerPRO®

Tractor PTO Installation

1. Secure the PTO coupling to the pump shaft by sliding the coupling as far forward as possible without touching the bearing shield and tightening the set screws down on the key of the pump shaft. Slide coupling onto PTO shaft and secure by pulling collar back on PTO quick coupler, sliding onto PTO shaft and locking into place.
2. Check pump rotation. An arrow on the pump indicates proper rotation direction.
3. To keep the pump from rotating with the shaft, set a torque arm and short length of chain. Bolt one end of the chain to the torque arm and secure the other to a stationary part of the tractor. Be sure the chain is at a point directly above or below the torque arm. Fastening torque chain to a point forward or backward from pump center will create a bending force on pump. Do not fasten pump rigidly to the tractor.
4. With the pump in position, connect the inlet hose to the "IN" port and the discharge hose to the "OUT" port. Make sure the inlet hose connection is tight. A loose connection will permit air to be drawn in and the pump will not prime itself. Use at least a 3/4" diameter hose on the inlet line.

Engine Installation

The pump base can be mounted on a frame and aligned for either direct-drive or belt and pulley drive. When mounting for direct-drive, be sure pump and engine shafts are in alignment. A flexible drive coupling will compensate for fractional misalignment. When mounting for pulley drive, be sure the engine and pump shafts are parallel. Align pulleys and keep them as

Operation

1. With a clear inlet line and open discharge line, the pump should displace liquid within 15 seconds. A squirt of oil in the inlet side of the pump before starting will accelerate priming action.
2. Never run the pump dry. Excessive heat will damage rollers and seals.
3. Do not pump abrasive white wash, paints or other abrasive liquids.
4. Do not use rusty supply barrels or sandy water.
5. Do not close the discharge line of the pump while it is running unless a means of bypassing the liquid has been installed. A simple relief or bypass valve can be easily installed in the discharge side.

Maximum Recommended Operating Temperature: 140°F (60°C)

Maintenance

Your Delavan pump is equipped with permanently lubricated bearings. They do not require further lubrication.

AFTER SPRAYING — Thoroughly flush the pump with clear water or use a solution of approximately one cup of ammonia in 10 gallons of water. This will dissolve most residue remaining in the pump. Squirt a light oil in the pump and rotate to cover the inner surfaces with a protective film.

STORAGE. If the pump is to be out of service for several days or stored, flush pump with clear water or use a solution of one cup of ammonia in 10 gallons of water. Then pump a 50 percent permanent antifreeze solution through the pump. Plug ports.

Caution: Do not use gasoline, kerosene, or fuel oil. Cast iron not recommended for Round Up®.

Servicing & Repair

Exclusive, patent pending Delavan RollerPRO® pumps are the only field-serviceable pump on the market! The only tool required to service RollerPRO® pump is a wrench. The pump remains mounted on drive shaft – no plumbing disassembly is required. Pump servicing takes about 3 minutes:

1. Loosen and remove four bolts on end plate of pump, and slide off
2. Replace rollers (and other parts from RollerPRO Repair kit as necessary— see next page for kit details)
3. Slide on end plate, tighten bolts and go!

Roller Pumps

4900 Series RollerPRO® Pump Parts

Ref #	Part#	Description	Qty/ Pump
1	33402	Body - 4900C & 4901C	1
	33404	Body - 4900DSS & 4901DSS	
2	34402	End Plate - 4900C & 4901C	1
	34404	End Plate - 4900DSS & 4901DSS	
3	31410	Shaft - 5/8" solid	1
	31415	Hollow shaft - 1/2"	
4	36451	Rotor	1
5	48234	Ultra Rollers 1/2" Diameter	4
6	37801	Shaft Seal	2
7	15072	Ball Bearing	1
8	38801	Needle Bearing	1
9	31350-142	Seal Ring	1
10	31411	Shaft Key	1
11	48236	Hex Head Screw - All "C" models	4
	40402	Hex Head Screw SS - All DSS models	
12	15070	Snap Ring	2
13		Name Plate: consult factory	1
14	40401	Nylon Insert	1
15	38802	Needle Bearing, Inner Ring	1

RollerPRO® Repair Kit

Part #: RK-4900 Complete kit of all parts for repair of all 4-RollerPRO Pump models Including:

Part #	Description	Qty/Kit
48234	Ultra Rollers 1/2" Diameter	4
37801	Shaft Seal	2
31350-142	Seal Ring	1
31411	Shaft Key	1

Accessories

Torque Bar and Chain **Part #: 33680**

Required to anchor PTO-mounted pumps in order to keep pump from rotating with the shaft

Coupler **Part #: 50101**

For 5/8" diameter electric motor or gas engine; 5/8" pump shaft; 2600 RPM; mild steel with set screws

Troubleshooting Guide

Problem	Causes and Remedies
No pressure or no capacity	Inlet line not fully immersed in tank, or low tank level.
	Pump not properly primed.
	Clogged inlet strainer.
	Inlet line air leaks. Use plumber's joint compound or Teflon tape. Tighten all connections. Check hoses for cracks or pin holes.
	Inlet line blocked or hose collapsed.
Pump runs, but low pressure and capacity	Pump is air-bound. Check for dry tank, or "traps" in the line. Try removing one nozzle until pump starts priming.
	Worn and leaking seals. Replace.
	Pump turning in wrong direction. (A reverse direction pump will not work on a tractor PTO).
	Inlet line and fittings partially blocked or too small. Hose kinked
	Worn rollers. Replace with new (see parts list).
Pump pressure good, but low output through the nozzles	Clogged inlet strainer.
	Nozzle orifices too small. Install larger sizes.
	Outlet line too small or blocked.
	Bypass partially open. Close it.
	Possible loose coupler...bent or damaged shaft.
Excessive noise or vibration	Excessive PTO speed...1200 rpm maximum.
	Inlet line leaks or clogged strainer
	Worn rollers. Replace with new.

Warranty

Delavan warrants RollerPRO Series Pumps for a period of two years from date of manufacture.

All products sold by Delavan are warranted only to purchasers from Delavan for resale or for use in purchasers' own business or original equipment manufacture, against defects in workmanship or materials under normal use, maintenance and service (rental use excluded).

The sole and exclusive obligation of Delavan under this or any implied warranty shall be to replace or, at its option, to repair, without charge, any product which is determined by Delavan to be defective in workmanship or materials after the product is returned to the Delavan factory*, shipping costs prepaid.

In no event shall Delavan be liable to any person for indirect or consequential damages or for injury or commercial loss resulting from any use or inability to use any Delavan product. Delavan expressly negates any other warranty, express or implied, including any warranty of merchantability or fitness for a particular purpose, or arising from any course of dealing or custom or usage of trade.

No person, including any dealer or representative of Delavan, is authorized to make any representation or warranty on behalf of Delavan in addition to or inconsistent with these provisions. Purchasers to whom these provisions apply agree to hold Delavan harmless from claims by their customers in excess of the obligations of Delavan expressly set forth herein.

* Important Return Safety Instructions

Since pumps can contain residues of toxic chemicals the following steps are necessary to protect all the people who handle return shipments, and to help pinpoint the reason for the breakdown. When you return your pump for warranty or repair, you must always do the following:

1. Flush chemical residue from the pump (best done in the field).
2. Tag pump with type of chemicals having been sprayed.
3. Include complete description of operation problem, such as how pump was used, symptoms of malfunction, etc.
